ABSTRACT

Some new pyrazoline derivatives were synthesized by using following synthetic sequences (i) Preparation of (E)-1-(4-aminophenyl)-3-(furan-2yl) prop-2-en-1-one (3a-b) by the reaction between p-NH\textsubscript{2}-aminoacetophenone (1) and heterocyclic aldehydes (2a-b) (ii) Preparation of (E)-1-(4-((E)-4-chlorobenzylideneamino) phenyl)-3-(furan-2-yl) prop-2-en-1-one and (E)-1-(4-((E)-4-chlorobenzylideneamino) phenyl)-3-(thiophene-2-yl) prop-2-en-1-one(5a-b) by the reaction of 3a-b with p-Cl-benzaldehyde (4), (iii) Preparation of new pyrazoline derivatives 7a-h was by the cyclicationsreaction between 5a-b with semicarbazide, thiosemicarbazide, phenylhydrazine and benzhydrazide(6a-d) in alcohol medium. The structures of the synthesized compounds were confirmed by using UV, IR,\textsuperscript{1}H-NMR, and \textsuperscript{13}C-NMR spectral data. The invitro antimicrobial activity of synthesized compounds were evaluated against selective bacteria and fungus and preliminary results showed that most of the compounds showed moderate to good activity.

Keywords: Pyrazolines, Chalcones, Schiff bases, Anti-microbial activity, Furan2-aldehyde.

INTRODUCTION

Pyrazolines are well known nitrogen-containing 5-membered heterocyclic compounds and their synthesis [1], characterization and studies have been developing field within the realm of the heterocyclic chemistry for the past several decades. The numerous pyrazoline derivatives have been found to possess prominent biological activities, such as antimicrobial [2-5], antibacterial [6], antifungal [7], anticancer [8], anti-inflammatory [9], analgesic [10] and antidepressant activities [11-12]. Particularly 2-Pyrazolines display a broad spectrum of potential pharmacological activities and are present in a number of pharmacologically active molecules such as phenazone/amidopyrene/methamphetamine (analgesic and antipyretic), azolidi/tandearil (anti-inflammatory), indoxacarb (insecticide) and anturane (uricosuric). The changes in their structure have offered a high degree of diversity that has proven useful for the development of new therapeutic agents with improved potency and lesser toxicity. We are highly promoted by these reports and also with continuation of our work on biologically important heterocyclic compounds, we planned to synthesize some bioactivepyrazoline entities with compact structure and evaluated their biological activity.

MATERIALS AND METHODS

General: Chemicals were procured from E. Merck (India), S. D. Fine Chemicals (India) and reagent/solvents were used without distillation procedure. Melting points were taken in open capillary tubes and are uncorrected. IR (KBr) spectra were recorded on a Perkin-Elmer 157 infrared spectrometer (\nu in cm\textsuperscript{-1}) and NMR spectra were recorded
on a Bruker spectrometer DPX-300MHz (Bruker, Germany) by using CDCl₃ or DMSO as solvent with tetramethylsilane (TMS) as an internal standard. All the spectral data are consistent with the assigned structures of the desired product and the progress of the reactions was monitored on silica gel G plates using iodine vapour as visualizing agent.

1. Synthesis of (E)-1-(4-aminophenyl)-3-(furan-2-yl) prop-2-en-1-one (3a-b):
A mixture of 4-NH₂-Acetophenone (0.01mol) and furan-2-aldehyde/thiophene-2-aldehyde (0.01 mol) was stirred in ethanol (40 ml). To this reaction mixture an aqueous solution of NaOH (10 ml) was added and this was stirred for 3-4 hr continuously at room temperature. The progress of the reaction was monitored by using TLC-technique. After completion of the reaction, the mixture was poured in crushed ice and acidified with dilute HCl. The solid separated was filtered and recrystallized from ethanol.

2. Synthesis of (E)-1-(4-((E)-4-chlorobenzylideneamino) phenyl)-3-(furan-2-yl) prop-2-en-1-one/ (5a-b):
A mixture of (E)-1-(4-aminophenyl)-3-(furan-2yl) prop-2-en-1-one (3a-b) (0.01 moles) and substituted 4-chlorobenzaldehyde (0.01 mole) was refluxed for 5-6 hr in distilled ethanol (40 mL). The progress of the reaction was monitored by using TLC-technique. After completion of the reaction indicated by TLC, the mixture was kept for overnight in refrigerator. The solid formed was filtered off, washed with water, dried and recrystallized from ethanol.

3. Synthesis of pyrazoline derivatives (7a-h):
(E)-1-(4-((E)-4-chlorobenzylideneamino) phenyl)-3-(furan-2-yl) prop-2-en-1-one with semicarbazide/thiosemicarbazide/phenylhydrazine/benzhydrazide (0.01 mol) were refluxed in ethanol with NaOH by using round bottom flask. The reaction mixture was refluxed for 4-5 hrs and the progress of the reaction was monitored by TLC. After completion of the reaction, the content were cooled and poured into crushed ice, the solid obtained was filtered, washed with water and recrystallized from ethanol.

Spectral data of some selective pyrazoline derivatives were given below:

(E)-3-(4-(4-chlorobenzylideneamino)phenyl-5-(furan-2-yl)-4,5-dihydro-1H-pyrazole-1-carboxamide (7a): UV-Vis(DMSO, nm): 203.72, 233.14, 280.00, 357.10., IR (KBr, cm⁻¹): 3409.63, 3260.96, (NH bands), 2827.86, 2984.31, 1617.52, 1559.98 (C=N); ¹H-NMR (CDCl₃, δ ppm): 3.34-3.40 (dd,1H), 3.53-3.60 (dd,1H), 4.00 (NH₂), 5.54-5.58 (dd,1H), 6.30-6.73 (m,3Ar-H), 7.30-7.70 (8Ar-H), 8.81 (s, CH=N).

¹³C-NMR (CDCl₃, δ ppm), 39.23 (C-4 of pyrazoline), 53.38 (C-5 of pyrazoline), 108.90-140.88 (13Ar-C), 141.91 (C-Cl), 148.54 (N=C of pyrazoline), 153.10 (C-connected with furan), 152.80 (N=C of pyrazoline), 153.10 (C-connected with furan), 152.80 (N=C of pyrazoline), 153.10 (C-connected with furan), 155.76 (CONH₂), 161.10 (CH=N, imine).

(E)-N-(4-chlorobenzyldiene)-4-(5-furan-2-yl)-1-phenyl-4,5-dihydro-1H-pyrazole-1-aniline (7c): UV-Vis(DMSO, nm): 203.72, 235.10, 284.00, 355.10., IR (KBr, cm⁻¹): 3353.33, 3160.15, (NH bands), 2827.00, 2884.31, 1619.52, 1561.05 (C=N); ¹H-NMR (CDCl₃, δ ppm): 3.09-3.15 (dd,1H), 3.68-3.80 (dd,1H), 6.31-6.35 (dd,1H), 6.68-7.84 (m,16Ar-H), 7.91 (s, CH=N); ¹³C-NMR (CDCl₃, δ ppm), 4.17 (C-4 of pyrazoline), 60.54 (C-5 of pyrazoline), 112.80-133.92 (18Ar-C), 135.82 (C-Cl), 140.79 (N=C=CH-N), 148.44 (C-connected with furan), 147.27, 148.07 (N=C of pyrazoline), 151.29 (CH=N, imine).

(E)-N-(4-chlorobenzyldiene)-4-(5-thiophene-2-yl)-1-phenyl-4,5-dihydro-1H-pyrazole-1-aniline (7g): UV-Vis(DMSO, nm): 203.72, 235.10, 284.00, 355.10., IR (KBr, cm⁻¹): 3353.33, 3160.15, (NH bands), 2827.00, 2884.31, 1619.52, 1561.05 (C=N); ¹H-NMR (CDCl₃, δ ppm): 2.92-3.10 (dd,1H), 3.40-3.51 (dd,1H), 3.95-4.22 (dd,1H), 6.61-7.89 (m,16Ar-H), 8.62 (s, CH=N); ¹³C-NMR (CDCl₃, δ ppm), 43.17 (C-4 of pyrazoline), 60.00 (C-5 of pyrazoline), 113.25-133.30 (18Ar-C), 145.52 (C-connected with furan), 144.27, 148.07 (N=C of pyrazoline), 151.29 (CH=N, imine).
RESULTS AND DISCUSSION

The synthesis of chalcones (3a-b) from p-NH₂-aminoacetophenone and heterocyclic aldehyde (2a-b) was performed according to the Claisen-Schmidt condensation reaction. The obtained chalcone derivatives reacted with p-Cl-benzaldehyde (4) produced Schiff bases (5a-b) and these products were cyclized by using semicarbazide, thiosemicarbazide, phenylhydrazine and benzhydrazide (6a-d) afforded corresponding pyrazoline derivatives (7a-h, Scheme-1).

**Scheme-1. Synthesis of pyrazoline derivatives**

The formation of final product explained based on the formation of hydrazone intermediate and subsequent addition of N-H bond to the olefinic bond of the propenoic moiety and detailed analytical data given in Table-1. The formation of chalcone was confirmed based on the UV-Vis spectra by the increased λmax values from 348.93 to 369.20 nm of carbonyl group due to extended conjugation in chalcones and Schiff base was confirmed the appearance new λmax value around 280.0 nm because of the formation of C=N chromophor. The formation of pyrazoline was identified the appearance new absorption band around 280 nm because of the formation of C=N chromophor. The formation of Schiff base was confirmed the appearance new absorption band around 420 nm and this may be due to C=O or C=S present in the pyrazoline moiety. The IR-stretching frequency of C=O group in the P-NH₂-aminoacetophenone appeared at 1644.92 cm⁻¹ and this value decreased towards 1601.24 cm⁻¹ in chalcone was confirmed the formation of chalcone and this is due to single bond character of C=O by the conjugation. The disappearance of weak doublet peak of NH₂ group around 3325.03 cm⁻¹ and further appearance of new band at 1604 cm⁻¹ due to C=N bond formation of Schiff base. The appearance of some new bands around 1555-1590 cm⁻¹ were confirmed that the C≡N bond formation in pyrazoline molecules. The ¹H-NMR spectra of products showed characteristics ABX system due to geminal-vicinal coupling between 4-CH₂ and 5-CH protons from the pyrazoline ring. The high field doublet-doublet at δ 3.35-3.40 and 3.53-3.63 ppm due to H4 and H5 protons attached with C-4 of pyrazoline ring and low field doublet-doublet around 5.54-5.58 ppm due to H5 attached with C-5. The imine (CH=N) proton appeared at 8.81 ppm and multiplets signals around 7.30-7.70 ppm was assigned to various aromatic protons. The ¹³C-NMR spectra of all compounds were showed some characteristic carbon signals and these are in good agreement with the proposed structures. The C4 and C5 carbon of pyrazoline ring resonated at 39.23-40.51 and 53.38-54.25 ppm respectively in all the compounds. The appearance of signal around 161.01 ppm in all the compounds due to imine carbon and several signals around 113.3-162.06 ppm were assigned to the various aromatic carbons. We have taken some selective compounds 7b, 7c, 7d, 7f, 7g for antimicrobial activity. Among these compounds, 7c, 7d, 7f, 7g were showed moderate to very good activity against Staphylococcus aureus and Escherichia coli bacteria. The above said compounds showed moderate activity against Aspergillus nigerfungi and both the case 7b was inactive.

* Gentamicin (10 µg) for Bacteria, * Ketoconazole (10 µg) for Fungi

CONCLUSION

In the present report, we synthesized a series of new pyrazoline derivatives obtained in moderate to good yield. All the synthesized compounds were characterized by using UV-Vis, IR, 1H-NMR, 13C-NMR spectroscopy and obtained results are well supported for our proposed structures. From the results of antimicrobial data, compounds 7c, 7d, 7f and 7g shown good activity against bacterial pathogens while the above compounds were found moderate active against fungi pathogens.
